

Features documentation

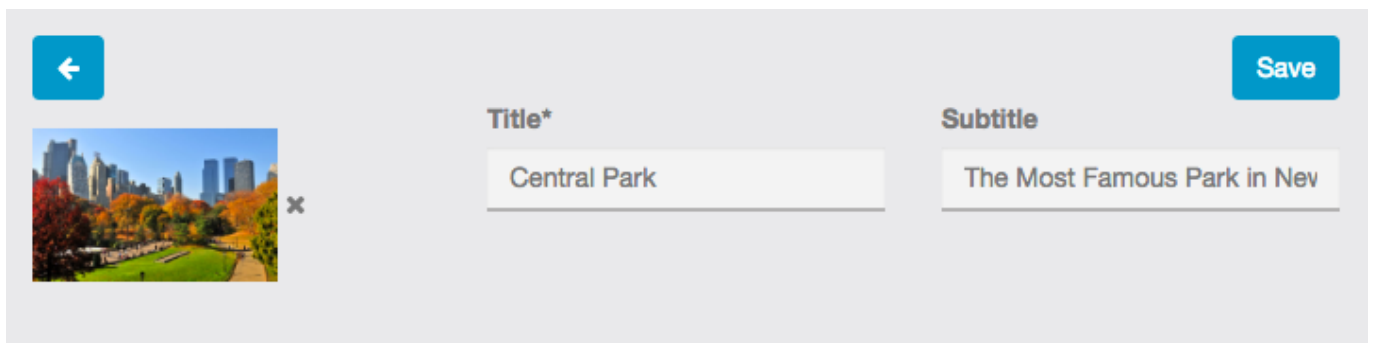

Places

With this feature, you will be able to create a list of geolocated places.

It will display all the places on a map, or, if the user opens the sheet of a particular location, he will be able to get the path and directions to this location, by walking or driving. The listing of the locations is sort according to the distance between the locations and the user, from closest to farthest.

After having added the feature to your app, click on the “+” to add a place to the list.

You can add an image that will be displayed in the list for this location, a title, and a subtitle:

Then, you have to enter an address for this location, or its coordinates. You can add a label for this address but it's not mandatory.

If you check the “Display address” checkbox, the address will be shown in the sheet of the location. If you check the “display location button” checkbox, it will display the button that will allow the user to see the path to this location.

Features documentation

Add sections:

Text **Image** **Video** **Button** **Attachment** **Silder** **Cover**

Label:* Adress

Address: Central Park Zoo, New York, État de New York, États-Unis

Latitude: 40.767778

Longitude: -73.9718335

☒ Display address

☒ Display location button

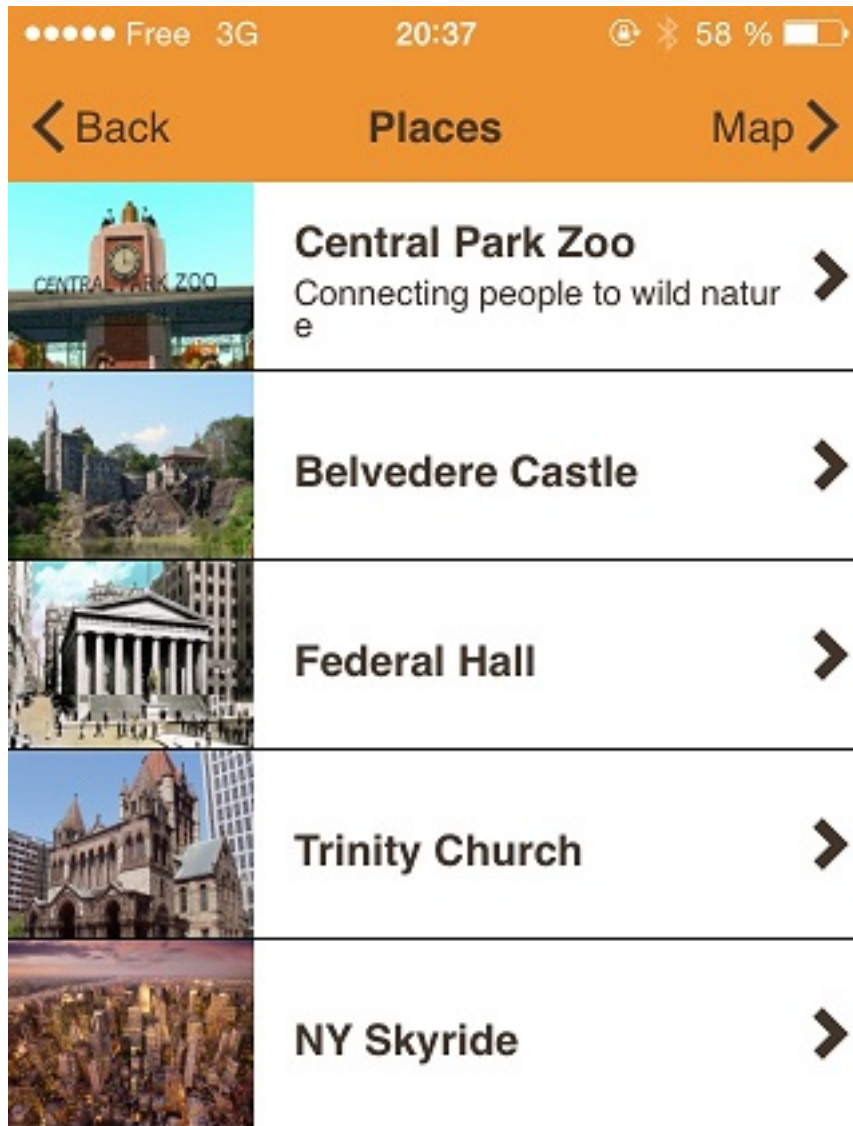

Save

Then you can add other sections like text + image, photo gallery, videos, cover. These sections are the same than in the Custom page feature, thus you can take a look to our support article about the Custom page feature to see how it work, [click here](#). You can also add touch to call buttons, or web links buttons.

Once you have set up the list, it could look like that:

The list:

Central Park Zoo

Connecting people to wild nature

Snow Leopard Cubs at Central Park Zoo

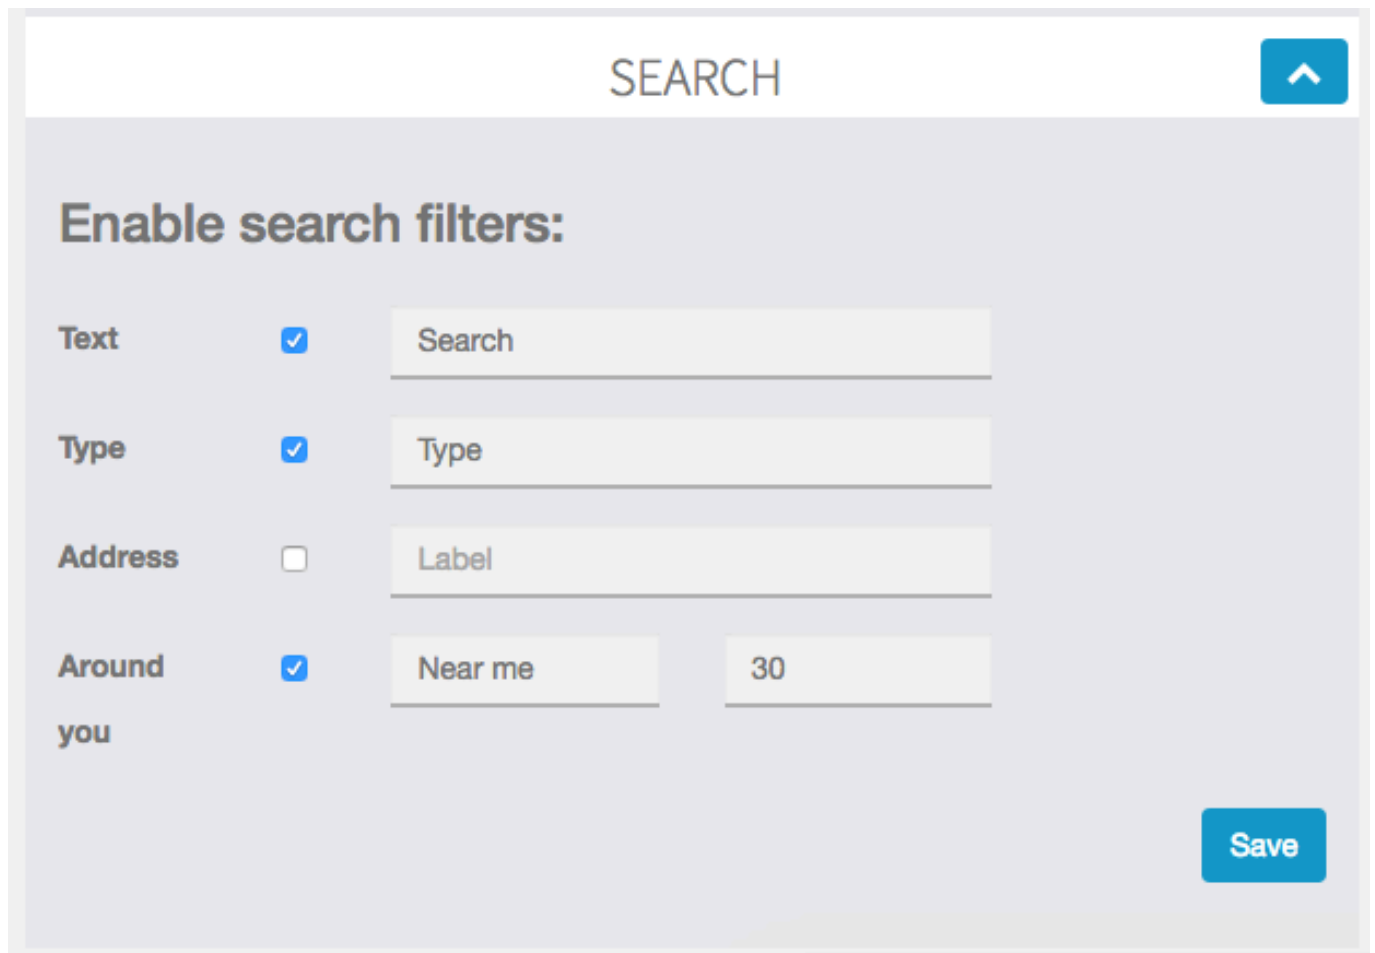

Central Park's new, state-of-the-art Zoo was built when the **Wildlife Conservation Society** took over the management in 1984. It showcases animals from tropical, temperate, and polar zones around the world. Restrooms are available with admission fee.

A favorite with many visitors is the sea lion pool

You can also add a search tab in the feature. You can search your different points of interest based on four types of search:

Features documentation

The screenshot shows a settings window titled 'SEARCH' with a blue upward arrow button in the top right corner. Below the title is a section 'Enable search filters:'. There are four filter options, each with a checkbox and a corresponding input field:

- Text**: Checked (blue checkmark), input field contains 'Search'.
- Type**: Checked (blue checkmark), input field contains 'Type'.
- Address**: Not checked (empty checkbox), input field contains 'Label'.
- Around you**: Checked (blue checkmark), input field contains 'Near me', and a radius input field contains '30'.

A blue 'Save' button is located in the bottom right corner of the settings area.

Just check the search filters which should be displayed in your app.

- “Text” allows you to make a classic search by text (for example, you can search for a “park”)
- “Type” allows you to search by tags
- “Address” allows you to search by address
- “Around you” allows you to only display places situated in the radius you set up

For the “Type” search, you have to add tags to your points of interest which will be displayed when you search by “Type”:
