

Features documentation

WordPress

WordPress feature allows you to integrate the content of a WordPress blog or website in an application.

With this feature you have two options:

1. You can create an application with only one WordPress page in which you will publish all the content of the blog or some categories you would have chosen.

ex:

2. Or you can create an application with several wordpress pages in order to publish in each of these pages the content of one category of the blog. This way the application homepage will look like this:

Page 1 / 5

(c) 2025 ABCApp <support@abcapp.org> | 2025-07-01 05:36

URL: <https://support.abcapp.org/index.php?action=artikel&cat=1&id=29&artlang=en>

Features documentation

Of course, you can change the icons of the wordpress pages in order to set up your own design. To sum up you can add as many wordpress pages as you want to enlighten the content of the blog.

Now, we are going to learn how to integrate the content of a WordPress website in an application.

Step 1:

First of all you must add a WordPress page in your application. Click on
This window appears:

FEATURE SETTINGS

Page name:

Activated
☐

YOUR LINKS

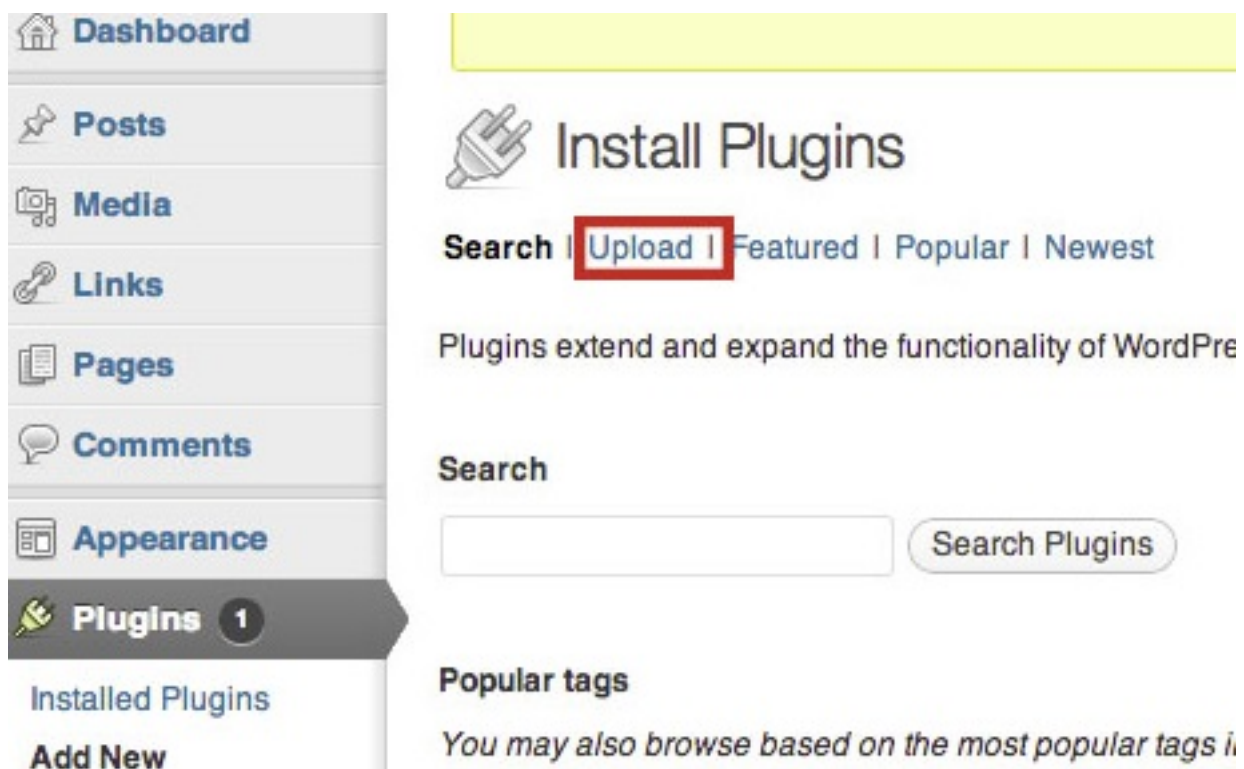

Insert a cover image

+ Add a link

Click on **“Click here to download our WordPress plugin”**. Without this plugin you cannot use this feature.

Then, go in your wordpress admin interface. This window appears:

Click on **“Plugins”** then **“Add new”**. This windows opens:

Click on **“Upload”**. This appears:

Features documentation

The screenshot shows a mobile app interface. At the top, there's a blue header bar with a menu icon on the left and a toggle switch labeled 'Activated' on the right. Below the header, the 'Page name' is set to 'In-App Messages'. A blue bar with the text 'ADDITIONAL INFORMATION' is below that. The main content area has a back arrow on the top left and an 'OK' button on the top right. It contains a text input field with the placeholder 'Please enter an expiration date for your message:' and the value '2018-04-05 16:47'. Below this is a section titled 'I want to send it' with two radio button options: 'now' (which is selected) and 'on a specific date'.

Click on **“Choose File”** and select the **“app-creator.zip”** document (no unzip necessary). Then, when you have selected it, click on **“Install Now”**, and activate it.

Step 2

Go back to your app

Enter the URL of your blog in **“Enter your WordPress URL”**.

The screenshot shows a mobile app interface with a blue header bar. Below the header, the word 'WORDPRESS' is centered in a large, light blue font. Below that, there's a text input field with the placeholder 'Click here to download our Wordpress plugin'. Below this, the text 'Enter your Wordpress URL:' is followed by a text input field containing the URL 'http://www.mywordpress.com'. To the right of the input field is a blue button with the text 'OK'.

Once you have entered the blog’s address click on OK. ABCApp will automatically find all the content of the blog and sort all the categories out. Thus you will be able to publish all the content of this blog or only one category. By default ABCApp selects all the categories of the blog but obviously you can unselect the ones you don’t want in the page.

Save

Here for example, we decided to only select the **“Exercices”** category, but we could select others if we wanted to. You can adopt the strategy you want, either you can create an application with only one wordpress page in which you will publish all the content of the blog, or you can create an application with several wordpress pages in order to publish in each the content of one category of your blog.

Once you have chosen your strategy and imported your wordpress content, don't forget to click on **“Save”**.

You're done!
