

# Features documentation

## In App Messages

The In App Messages feature allows you to display a message to users that are currently using your application.

First, create a new in app message by clicking on 

Now is the time for you to give a title to your message and to write the text you want the users to see. You can also add an image that will be displayed on the screen of your users.

### EDITING

Then click on  to continue the process and to select if you want your message to be sent to a specific location.

You can set an expiration date for your message.

# Features documentation

Page name: In-App Messages Activated

← ADDITIONNAL INFORMATION → OK

Please enter an expiration date for your message:  
2018-04-05 16:47

I want to send it

now

on a specific date

You can either set your message to be sent right now, or you can program it to be sent at a specific date and time.

Page name: In-App Messages Activated

← ADDITIONNAL INFORMATION → OK

message:

Time 20:10

Hour

Minute

Now Done

2017-04-09 20:10

Once you've decided whether to send your message now or later, click on

OK
