## Facebook API

Here is how to proceed.

1. You need a Facebook user account
2. Go at <https://developers.facebook.com/>
3. Click on “Apps” and “Add a New App”
4. Enter a name for your Facebook app (you may choose a name that refers to your platform, like “Apps Maker Company”). This name will be shown to the app users when they would want to create an account in the mobile app through Facebook connect.
5. Choose “Communication” for the app category, and click on “Create App ID”:

### Create a New App ID

Get started integrating Facebook into your app or website

Display Name

My ABCApp

Contact Email

test@test.com

Category

Communication ▼

By proceeding, you agree to the [Facebook Platform Policies](#)

Cancel

Create App ID

6. Choose “Facebook Login” in the list by clicking on “Get Started”:

### Product Setup

#### Facebook Login

The world's number one social login product.

Get Started

7. And set the settings like this (change “yourabcappdomain” by the URL to your ABCApp):  
(We recommend you to set both “http” and “https” address, and so 6 entries)

# API keys

### Client OAuth Settings

**Client OAuth Login**  
Enables the standard OAuth client token flow. Secure your application and prevent abuse by locking down which token redirect URIs are allowed with the options below. Disable globally if not used. [?]

**Web OAuth Login**  
Enables web based OAuth client login for building custom login flows. [?]

**Force Web OAuth Reauthentication**  
When on, prompts people to enter their Facebook password in order to log in on the web. [?]

**Embedded Browser OAuth Login**  
Enables browser control redirect uri for OAuth client login. [?]

Valid OAuth redirect URIs

**Login from Devices**  
Enables the OAuth client login flow for devices like a smart TV [?]

8. From the left menu, click on “Settings”

9. In the App Domains field, let it blank.

10. Click on +Add Platform and choose “Website”

11. In the Site URL field enter the address of your platform (aka your ABCApp) and this time with “http://”, and “www.” if your platform is on your main domain. If it’s on a subdomain, enter your subdomain like http://apps.mydomain.com. Enter also the URL to your domain name, and http://\*.yourdomain.com (if your ABCApp is at apps.abcapp.org enter http://\*.abcapp.org”. Then save.

(We recommend you to set both “http” and “https” address, and so 6 entries)

### Website

Quick Start ×

Site URL

http://yourplatform.com, http://yourdomain.com/, http://\*.yourdomain.com/

2. You can also add an app icon for your app. It’s not mandatory but your Facebook app will be more professional with an icon when the user will be invited to connect with his Facebook account. Click on Save Changes.

13. From the left menu, click on App Review

14. Switch “Make My ABCApp app public?” to “yes”

15. From the left menu, click on Settings. Copy and paste your App ID and App secret, in your ABCApp Settings > APIs.

17. You’re done!
